

HELP PROTECT YOURSELF WHEN YOU ARE 65+ YEARS OLD

Important Information on Adult Vaccination for Pneumococcal Pneumonia

Why am I at risk for pneumococcal pneumonia?

You are at **6.1x GREATER RISK** for pneumococcal pneumonia if you are 65 years of age or older compared to healthy adults aged 18-64

What is pneumococcal pneumonia?

Pneumococcal pneumonia is a potentially serious lung disease caused by bacteria. It can

- Strike any time of year, anywhere
- Make it hard to breathe
- Land you in the hospital in serious cases, or even be life-threatening

How can I help protect myself?

Getting vaccinated is one of the best ways to help protect yourself! That's because getting a pneumococcal vaccine helps the immune system produce antibodies that help protect against certain pneumococcal bacteria that can cause disease.

Your pharmacist can provide the latest recommendations for staying up to date with pneumococcal pneumonia vaccination when you are 65 years of age or older.

Why do I need another pneumococcal pneumonia shot?

Even if you already received a pneumonia vaccine in the past, a different vaccine may be recommended to make sure you are up to date. You may also be eligible for a different vaccine if you can't remember what vaccines you've had before.

Talk to Your Pharmacy Team to Schedule Your Pneumococcal Vaccine Today!
