

# DO YOU KNOW THESE FACTS ABOUT COVID-19 VACCINES?

## Myth:

**Vaccines can make you sick with COVID-19.**

## Fact:

COVID-19 vaccines cannot give you COVID-19 because they do not contain the live virus that causes the disease. COVID-19 vaccines teach our immune systems how to recognize the virus and help fight against it in the future.<sup>1</sup>

## Myth:

**I can't receive more than one vaccination at the same time.**

## Fact:

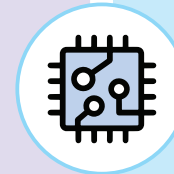

According to CDC, eligible people may receive more than one vaccine during the same visit. Talk to a healthcare professional or pharmacist about the risks and benefits of getting more than one vaccine in one visit.<sup>2</sup>

**Vaccines can change my DNA.**

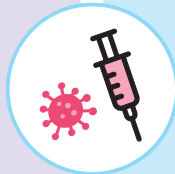

Vaccines do not change or interact with your DNA in any way.<sup>1</sup>

**COVID-19 vaccines contain microchips.**

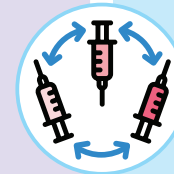

COVID-19 vaccines do not contain microchips. Vaccines are developed to fight against disease and are not administered to track your movement.<sup>1</sup>

**I don't need to get a COVID-19 vaccine because I've already had COVID-19.**

According to CDC, COVID-19 vaccines provide a more predictable level of protection than infection alone and can provide added protection for people who have already had COVID-19.<sup>1</sup>

**My next COVID-19 vaccination must be by the same manufacturer (i.e. Pfizer and BioNTech, Moderna, or Novavax).**

People ages 12 and older can choose which updated COVID-19 vaccine to receive. In some cases, other considerations should be discussed with a healthcare professional. For people under the age of 12, talk to a healthcare professional.<sup>3</sup>

Visit [covid19pfizer.com](https://covid19pfizer.com) for information on COVID-19 and a vaccine option from Pfizer and BioNTech, and to learn how you can help protect yourself and those you take care of.
