

# **Are you or your loved one 50 or older with certain chronic conditions?**

Don't wait. Get informed, talk to the  
care team about vaccination.

**RSV vaccines, including Pfizer's,  
are available.**

RSV = respiratory syncytial virus.

## WHAT IS RSV?

RSV is a highly contagious virus that can make it hard to breathe.

Like many viruses, RSV is spread through the air when an infected person breathes, coughs, or sneezes, and their droplets come in contact with someone else.

## RSV CAN BE DANGEROUS FOR ADULTS

Similar to a cold, RSV symptoms can start mild, like congestion or a runny nose, but can quickly become more serious and lead to pneumonia, severe infection, and even hospitalization.

## HOW YOU CAN HELP PROTECT YOURSELF OR YOUR LOVED ONE

There are no prescription treatments for RSV, but vaccination can help protect against this respiratory illness.

If you're **75** or older, or **50-74** with certain risk factors\* for severe RSV disease, talk to the care team about vaccination against RSV.
